

ACTIVITY 2:

Check the objects you have in your home, especially those that are most commonly used. You have to choose 1 object that can be recycled or reused, indicating what tasks would have to be done to achieve it. On the other hand, you must choose another object that are disposable because there are no methods to reuse them today.

In each case you must explain in words the content of the activity, and finally you have to accompany the text with an Infographic in which the different phases of each of the chosen objects are visualized.
